Summary

Experienced Java Backend Developer with 3.6 years of specialized experience in digital payments, card issuance, mobile wallet systems, and tokenization platforms. Skilled in building secure and scalable microservices using Java, Spring Boot, JPA, and PostgreSQL. Strong expertise in API development, authentication, HSM integrations, and real-time transaction processing. Known for strong analytical abilities, fast learning, and delivering robust solutions in high-demand fintech environments

Experience

Girmiti Software Pvt.Ltd

Nov 2023 – Nov 2025

Software Engineer

India

- Developing backend solutions using **Spring Boot**, with **Postgre SQL** as the database, in a collaborative team environment.
- Built **secure scalable** backend service using, **Microservice Architecture** ensuring, high availability and **transactional integrity**.
- Engineered real-time **payment middleware** for SPOS (smart point of sale) devices using the **ISO 8583** protocol, incorporating complex logic for retries and dynamic **currency conversions**.
- Integrated payments functionality with **Android** devices for **Digital Wallet transactions (Visa & Mastercard)**, establishing reliable card present and card-not-present flows.
- Served as primary **on-call** for the team.

Girmiti Software Pvt.Ltd

July 2022 - Oct 2023

Associate Software Engineer

India

- Worked on **spring Boot** as Backend, **postgreSQL** as database to make web applications.
- **Improved code coverage** to 90% by adding new test cases.
- Improved an **API performance** by 13% creating required **indexes** to reduce query time by 34%.

Education

KLE College Of Engineering and Technology

August 2018 - June 2022

Bachelor of Engineering (GPA of 8.1)

Belgavi, India

Projects

3. Digital Wallet | *Java, Spring Boot, PostgreSQL* (Nov 2023 - July 2025)

- Implemented complete wallet onboarding including user registration, KYC validation, device binding, session management, and JWT-based security.
- Developed NFC/HCE-based tap payments through dynamic cryptograms, wallet tokens, device authentication, and secure channel establishment.
- Integrated push notifications and SMS alerts for wallet events such as payments, OTP, and card updates.
- Built APIs for add card, token generation, card verification, wallet activation, and secure provisioning.

2. Issuance | *Java, Spring Boot, PostgreSQL* (Jan 2023 - Oct 2023)

- Contributed to the development of a multi-institution, multi-currency card issuance platform supporting prepaid, debit, virtual cards.
- Implemented end-to-end card lifecycle management including creation, personalization, PAN generation, token provisioning, activation.
- Integrated with MDES (Mastercard Digital Enablement Service) and VTS (Visa Token Service) to enable digital card provisioning into wallets like Google Wallet, Apple Wallet, and OEM apps.
- Optimized issuance workflow performance and reduced provisioning latency using caching, async processing, and database tuning.
- Developed issuer processing modules for online transaction authorization (ONUS/OFFUS), risk fraud checks, and rule-based decision engines.

1. Payment Gateway | *Java, Spring Boot, PostgreSQL* (Sept 2022 - Jan 2023)

- Developed and enhanced a Payment Gateway and Acquiring Platform used by banks, processors, and fintech clients.
- Implemented complete transaction processing lifecycle — authorization, authentication, void, sale, settlement, refund, reversals, disputes — for POS, mPOS, e-commerce, and mobile channels.
- Built merchant onboarding and management modules including MCC setup, fee configuration, and settlement rules.
- Ensured system adherence to PCI-DSS, PA-DSS, OWASP, and encryption standards (AES/RSA/HMAC)
- Designed microservices for merchant portal, reconciliation, reporting, and settlement.

Achievements

- Rated 1848+ at leetcode.com which ranks among top 5.7% programmers throughout a site.
- Solved more than 750+ problems across platforms.
- Secured 100/100 in D2C Recruitables and secured rank among top 4%.
